

The DustLock pack comes with everything you need to complete its assembly. Duck Tape will be required to secure the flange to the entrance surround.

Please check your pack contains the following items before commencing assembly:

- 1 x frame chamber – comprising:-
- 8 x 80cm end frame poles, 8 x 2m paired vertical poles, 8 x corner joints
- 1 x DustLock cover – polythene single chamber
- 2 x weighted entrance flaps with adhesive tape for positioning

To assemble follow steps 1 - 11 below

1. Lay the polythene on the ground, pre-cut entrance facing up.

2 and 3. Make-up the two end frame sections.

4. Insert the end frame sections into the tent.

5 and 6. Connect two vertical pole sections through pre-cut entrance. Insert each pole into corner joint first and then join at centre

7 and 8. Raise the unit upright and insert remaining two vertical pole sections to complete assembly

9. Attach one entrance flap to open side.

10. Fully assembled DustLock.

11. Position the unit in front of the entrance to the work site. Create a seal by securing the flange to the entrance surround using a suitable adhesive tape. Cut the second entrance and secure flap: see note

**Note:** Depending on the work site you intend using DustLock in, decide where you want to position the second entrance to the unit. Cut an opening in the polythene and secure the second flap on the inside using adhesive tape. If working in a potentially wet area place a non slip surface onto the floor of the DustLock. It is also advisable to adhere black/yellow warning tape to the step over at the entrance/exit.

To dismantle the unit, reverse the procedure
